

Name: _____ Hour: _____ Date: _____

In questions 1-4, complete the following steps.

- a. Explain in words the process you would use to solve the problem.
- b. Describe a real life situation that the equation could represent.

1. $249.32 + (-2.78) = 246.5$

3. $\frac{1}{6} + (-10) = -9\frac{5}{6}$

2. $-7.2 + 6.4 = -0.8$

4. $-4\frac{1}{3} + \frac{5}{6} = -3\frac{1}{2}$
